

## Jeff's Binocular Picks for January 2018

This monthly list of binocular objects contains some of my choices of the best objects visible through binoculars. Many of these are easy targets and visible thru ordinary binoculars, but a few of them can be quite challenging. Viewing some the more challenging objects from a dark location will help, and the steadiness obtained by mounting your binoculars on a tripod will also help! Use this list along with a current copy of the monthly sky map from [www.skymaps.com](http://www.skymaps.com) and try to locate as many as you can. This will help you learn your way around the night sky. This list is also good for small scopes, too! Good Luck and have fun hunting!
